ABSTRACT

“**Your Handyman**” is a web-based application developed using **React** for the frontend and **Node.js with MySQL** for the backend. This project is designed to provide **easy and reliable access to household and professional services**. In today’s busy lifestyle, people often find it difficult to get skilled service providers like plumbers, electricians, carpenters, and cleaners on time. Traditional methods such as calling individually or relying on personal recommendations are **slow, unreliable, and unclear**. The “Your Handyman” project solves these problems by creating a **centralized platform** that connects users with service providers efficiently.

Users can **browse available services, view service provider information, and book appointments** according to their needs. They can also **track their service requests in real-time**, which ensures transparency and reduces uncertainty. Notifications and updates keep users informed about the status of their bookings. The application also includes **authentication for users and service providers**, which keeps data secure and ensures only authorized access.

Administrators have a **dashboard to manage users, services, and bookings** efficiently. They can schedule service providers properly and resolve user requests on time. The database is designed to store information about users, services, and bookings systematically. This allows administrators to generate reports, track trends, and manage the system effectively. Security measures like **session management and password protection** are included to safeguard sensitive data and ensure system reliability.

The application focuses on **ease of use, responsiveness, and accessibility**, making it simple even for non-technical users. React provides a dynamic and interactive interface, while Node.js handles backend logic. MySQL stores structured data and ensures fast access.

By automating service requests, “**Your Handyman**” reduces errors and improves efficiency. It also allows future features like **online payment, ratings, and mobile support**, making service booking easier and more professional, which enhances user satisfaction.

ACKNOWLEDGEMENT

First and foremost, we thank the **LORD ALMIGHTY** for his abundant blessings that is showered upon our past, present and future successful endeavors.

We extend our sincere gratitude to our college management and Principal **Dr. S. Arivazhagan, M.E., Ph.D.**, for providing sufficient working environment such as systems and library facilities. We also thank him very much for providing us with adequate lab facilities, which enable us to complete our mini-project.

We would like to extend our heartfelt gratitude to **Dr. J. Raja Sekar, M.E., Ph.D.**, Professor and Head, Department of Computer Science and Engineering, Mepco Schlenk Engineering College for giving me the golden opportunity to undertake a mini-project of this nature and for his most valuable guidance given at every phase of our work.

We would also like to extend our gratitude and sincere thanks to **Dr. G. Ananthi, M.E., Ph.D.**, Associate Professor and **Dr. S. Karkuzhali, M.E., Ph.D.**, Assistant Professor (Sr. Grade), Department of Computer Science and Engineering, Mepco Schlenk Engineering College for being our Project Mentors. They put their valuable experience and expertise in directing, suggesting and supporting us throughout the mini-project to bring out the best.

Our sincere thanks to our revered **faculty members and lab technicians** for their help over this mini-project work.

Last but not least, we extend our indebtedness towards our beloved family and our friends for their support which made the mini-project a successful one.
